Spatio-temporal Distribution of Earthquake Disaster in the Belt and Road Area of 2001

Data Documentation

I. Dataset/atlas content features
   i. Abstract
      This dataset described the distribution of earthquake disasters in countries along the Belt and Road in 2001, which mainly record the seismic location, earthquake grade, seismic wave coverage and range information. They were collected and organized by the Institute of Geographic Sciences and Natural Resources Research, Chinese Academy of Sciences. This dataset was composed of 16 vector files. They could be used to study the occurrence and distribution of earthquake disasters, and provided an important basis for preventing earthquake disasters and reducing the negative impact of earthquake disasters.
   ii. Elements (content fields)
      This dataset was named as “Spatio-temporal Distribution of Earthquake Disaster in the Belt and Road Area during 2001”, which included 1 data file. The folder structure is based on the “month” and the “earthquake magnitude”. There are mainly 1 data name for different years and they are described as table 1.
