Spatio-temporal Distribution of Earthquake Disaster in the Belt and Road Area 2002

Data Documentation

I. Dataset/atlas content features
   i. Abstract
   This dataset described the distribution of earthquake disasters in countries along the Belt and Road in 2002, which mainly record the seismic location, earthquake grade, seismic wave coverage and range information. They were collected and organized by the Institute of Geographic Sciences and Natural Resources Research, Chinese Academy of Sciences. This dataset was composed of 27 vector files. They could be used to study the occurrence and distribution of earthquake disasters, and provided an important basis for preventing earthquake disasters and reducing the negative impact of earthquake disasters.
